

- QUESTION: How do you know that the concentration of a solution is not too high?
- ANSWER: If the solution is too concentrated, the particles will be too close together and will not move freely.
- QUESTION: How do you know that the concentration of a solution is not too low?
- ANSWER: If the solution is too dilute, the particles will be too far apart and will not interact with each other.

QUESTION: How do you know that the concentration of a solution is not too high?

ANSWER: If the solution is too concentrated, the particles will be too close together and will not move freely.
