

QUESTION

QUESTION
 The diagram shows a cross-section of a plant cell. The cell is shown in a state of plasmolysis. What is the effect of plasmolysis on the cell wall and the cell membrane?

ANSWER

EXPLANATION

- 1. The cell is in a hypertonic solution.
- 2. Water moves out of the cell by osmosis.
- 3. The cell membrane is pulled away from the cell wall.

ANSWER The cell wall is rigid and the cell membrane is flaccid.
