

the surface of the crystal. The growth of a crystal from a liquid is a process which is controlled by the rate of diffusion of the solute to the crystal surface.

DIFFUSION CONTROLLED GROWTH

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.

The rate of growth of a crystal from a liquid is controlled by the rate of diffusion of the solute to the crystal surface.
