

1. The first step in the process of the cell cycle is the replication of DNA.

2. The second step is the condensation of the DNA into chromosomes.

3. The third step is the separation of the sister chromatids.

4. The fourth step is the movement of the chromosomes to opposite poles of the cell.

5. The fifth step is the division of the cell into two daughter cells.

6. The sixth step is the reformation of the nuclear envelope.

7. The seventh step is the reformation of the nucleolus.

8. The eighth step is the completion of the cell cycle.

9. The ninth step is the reformation of the nuclear envelope.

10. The tenth step is the completion of the cell cycle.
