

**QUESTION 10**

Which of the following is a characteristic of a **primary cell**?

- A. It is rechargeable.
- B. It has a high energy density.
- C. It is used in applications where long life is required.
- D. It is used in applications where high current is required.
- E. It is used in applications where low current is required.
- F. It is used in applications where high voltage is required.
- G. It is used in applications where low voltage is required.
- H. It is used in applications where high power is required.
- I. It is used in applications where low power is required.
- J. It is used in applications where high temperature is required.
- K. It is used in applications where low temperature is required.
- L. It is used in applications where high humidity is required.
- M. It is used in applications where low humidity is required.
- N. It is used in applications where high pressure is required.
- O. It is used in applications where low pressure is required.

ANSWER: C
