

QUESTION 101

Question	Answer	Explanation
101. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?	SSL/TLS	SSL/TLS is a protocol that provides secure communication over a network. It is used to encrypt data and ensure its integrity. Other protocols like SSH, SFTP, and SCP are also used for secure communication, but they are not specifically designed for network-level security.
102. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?	SSH	SSH is a protocol that provides secure communication over a network. It is used to encrypt data and ensure its integrity. Other protocols like SFTP, SCP, and SSL/TLS are also used for secure communication, but they are not specifically designed for network-level security.
103. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?	SFTP	SFTP is a protocol that provides secure communication over a network. It is used to encrypt data and ensure its integrity. Other protocols like SCP, SSH, and SSL/TLS are also used for secure communication, but they are not specifically designed for network-level security.
104. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?	SCP	SCP is a protocol that provides secure communication over a network. It is used to encrypt data and ensure its integrity. Other protocols like SFTP, SSH, and SSL/TLS are also used for secure communication, but they are not specifically designed for network-level security.
105. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?	SSL/TLS	SSL/TLS is a protocol that provides secure communication over a network. It is used to encrypt data and ensure its integrity. Other protocols like SSH, SFTP, and SCP are also used for secure communication, but they are not specifically designed for network-level security.
106. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?	SSH	SSH is a protocol that provides secure communication over a network. It is used to encrypt data and ensure its integrity. Other protocols like SFTP, SCP, and SSL/TLS are also used for secure communication, but they are not specifically designed for network-level security.
107. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?	SFTP	SFTP is a protocol that provides secure communication over a network. It is used to encrypt data and ensure its integrity. Other protocols like SCP, SSH, and SSL/TLS are also used for secure communication, but they are not specifically designed for network-level security.
108. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?	SCP	SCP is a protocol that provides secure communication over a network. It is used to encrypt data and ensure its integrity. Other protocols like SFTP, SSH, and SSL/TLS are also used for secure communication, but they are not specifically designed for network-level security.

QUESTION 102

102. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?

QUESTION 103

103. A network administrator is configuring a new network. The administrator wants to ensure that the network is secure and that the data is encrypted. Which of the following protocols should the administrator use?
