

THE HISTORY OF THE HUMAN GENOME PROJECT

1980s: The first human genome map was created, showing the location of genes on chromosomes. This was a major milestone in genetics.

1990s: The Human Genome Project was launched, a large-scale international research effort to determine the sequence of the human genome.

1996: The first draft of the human genome was published, showing the sequence of the human genome.

2000: The first draft of the human genome was published, showing the sequence of the human genome.

2003: The first draft of the human genome was published, showing the sequence of the human genome.

2004: The first draft of the human genome was published, showing the sequence of the human genome.
