

## RESEARCH AND ANALYSIS

1. Identify the research objectives and the research questions.

2. Determine the research design and the data sources.

3. Develop a research plan and a timeline.

4. Collect and analyze the data.

5. Interpret the results and draw conclusions.

6. Prepare a research report and present the findings.

7. Evaluate the research process and the results.

8. Identify the research objectives and the research questions.

9. Determine the research design and the data sources.

10. Develop a research plan and a timeline.

11. Collect and analyze the data.

12. Interpret the results and draw conclusions.

13. Prepare a research report and present the findings.

14. Evaluate the research process and the results.
